South Africa
Congenital Hypothyroidism

Welcome to the PHG Health Needs Assessment Calculator for Congenital Hypothyroidism. The contents of this file are listed below:

Full name of the sheet	Short name
Country demographic, maternal health and socioeconomic indicators	Demography
Country health-service indicators	HealthServices
CHT Epidemiology 1.1: Country epidemiology	CHT-E1.1
CHT Epidemiology 1.2: International comparison	CHT-E1.2
CHT Epidemiology 2.1: Data on affected pregnancies: Research studies	CHT-E2.1
CHT Epidemiology 2.2: Data on affected pregnancies: Surveillance	CHT-E2.2
CHT Epidemiology 2.3: Data on affected pregnancies: Other sources	CHT-E2.3
CHT Epidemiology 2.4: Summary of affected pregnancies	CHT-E2.4
CHT Epidemiology 2.5: Sub-population variation in affected pregnancies	CHT-E2.5
CHT Epidemiology 3.1: Mortality data: Research studies	CHT-E3.1
CHT Epidemiology 3.2: Mortality data: Vital registration data	CHT-E3.2
CHT Epidemiology 3.3: Mortality data: Other sources	CHT-E3.3
CHT Epidemiology 3.4: Summary mortality estimates	CHT-E3.4
CHT Epidemiology 3.5: Sub-population variation in mortality	CHT-E3.5
CHT Epidemiology 4.1: Population prevalence: Research studies	CHT-E4.1
CHT Epidemiology 4.2: Population prevalence: Other sources	CHT-E4.2
CHT Epidemiology 4.3: Summary of population prevalence	CHT-E4.3
CHT Epidemiology 4.4: Sub-population prevalence variation	CHT-E4.4
CHT Interventions 1: Effect of newborn screening	CHT-Interv1
CHT Needs Assessment: Quantitative baseline	CHT-NA1
CHTC Needs Assessment: Quantitative assessment of interventions	CHT-NA3

(There is no sheet CHT-NA2.)

Please note condition specific data in this sheet relates to thyroid a/dysgenesis, plus the rare inherited thyroid disorders, as detected by neonatal screening in countries without iodine deficiency.

TB = total births (live births + stillbirths)

South Africa
Congenital Hypothyroidism
CHT Epidemiology 2.4: Summary of affected pregnancies

Indicator	Your estimates	Range	PHGDB minimum estimates	Chosen estimates	Range	Source
Number of annual affected **live births**			107			
Annual birth prevalence / 1000 TB			0.10			
Number of annual affected **stillbirths**			0			
Stillbirth prevalence / 1000 TB / year			0.00			

If there are specific sub-types of condition, you can repeat this exercise below. However, you should consider (a) whether sub-types would have different implications for advocacy, and (b) whether a sub-type might require a full, specific needs assessment.

TB = total births (live births + stillbirths);

South Africa
Congenital Hypothyroidism
CHT Epidemiology 2.5: Sub-population variation in affected pregnancies

If the birth prevalence rates vary by population sub-group (e.g. geographically or by another factor), indicate any population groups with different prevalence estimates from the whole population and describe reasons for variation. If a group is substantially different from the general population, you may wish to conduct a needs assessment for that group alone.

Population sub-group	Number of affected live births	LB prevalence / 1000 TB	Reason for variation

Population sub-group	Number of affected stillbirths	SB prevalence / 1000 TB	Reason for variation

TB = total births (live births + stillbirths); ToP = termination of pregnancy

South Africa
Congenital Hypothyroidism
CHT Epidemiology 3.1: Mortality data: Research studies

Source, year, site	Sample size	Age group	Study quality and representativeness	Main findings

Based on the studies above, enter the best estimates for the specific mortality by age-group e.g. infant, under 5s, etc, as appropriate, and a range of values to reflect uncertainty of estimates and within-country variation.

If studies are not representative of the national population you may need to weight your data (see the Guide for explanation on weighting and help with the calculations).

South Africa
Congenital Hypothyroidism
CHT Epidemiology 3.2: Mortality data: Vital registration data

Fill in the blank cells based on your vital registration data.	
Enter year and source of data	
Registered data	
Total registered live births	
Registered condition-specific neonatal deaths (first 28 days of life)	
Registered condition-specific infant deaths (first year of life)	
Registered condition-specific under-5 deaths (first 5 years of life)	
Registered condition-specific neonatal mortality ratio (condition-specific neonatal deaths / 1000 live births in the same year)	#DIV/0!
Registered condition-specific infant mortality (condition-specific infant deaths / 1000 live births in the same year)	#DIV/0!
Registered condition-specific under-5 mortality (condition-specific under-5 deaths / 1000 live births in the same year)	#DIV/0!

***Adjustment for under-ascertainment of cause of death and sub-registration of deaths*:** Enter estimates in the highlighted cells. It is not always possible to adjust the estimates, in which case you may give the value '1', accepting that the estimates in these cases will usually be biased towards low values. (Or you may move to the next section.)
It is assumed that under-ascertainment is stable across age-groups; if ascertainment varies by age-group, you could use separate estimates for each age group.

Estimated completeness of recording: what proportion of deaths in affected persons were registered as such?		Range: 0 to 1
Population coverage: what proportion of the total country/territory population is covered by the vital registration?		Range: 0 to 1
Death ascertainment (population coverage x completeness)	0	
Estimated values for the total country/ territory population		
Estimated number of live births in total population	#DIV/0!	
Estimated number of neonatal deaths in total population (number of deaths registered in neonatal period /ascertainment)	#DIV/0!	
Estimated number of infant deaths in total population (number of deaths registered in first year of life / ascertainment)	#DIV/0!	
Estimated number of under-5 deaths in total population (number of deaths registered in under-5s / ascertainment)	#DIV/0!	
Estimated neonatal mortality ratio (estimated neonatal deaths / 1000 live births)	#DIV/0!	
Estimated infant mortality ratio (estimated infant deaths / 1000 live births)	#DIV/0!	
Estimated under-5 mortality ratio (estimated under-5 deaths / 1000 live births)	#DIV/0!

Formula in column D: Number of affected people/ (Total number of people in population subgroup/1000)

South Africa
Congenital Hypothyroidism
CHT Interventions 1: Effect of newborn diagnosis and treatment

Baseline birth prevalence of CHT, per 1000 total births*		
Variables		
Coverage of newborn screening		Range: 0 to 1
Proportion of positive-screened patients receiving diagnosis treatment		Range: 0 to 1
Effectiveness of treatment		Range: 0 to 1
Results		
Proportional reduction of uncontrolled cases of CHT through NBS and treatment[1]	0	
Prevalence of uncontrolled CHT after newborn screening and treatment, per 1000 total births[2]	0	

LB = live births

CHT = congenital hypothyroidism

NBS = newborn screening

* If you don't have data on birth prevalence but do have data on screening, you can estimate birth prevalence by combining the proportion screened positive with the number of total births. (This assumes that screening is randomly distributed in the population).

[1]Coverage of newborn screening X Proportion of screen-positive cases receiving treatment X Effectiveness of treatment

[2]Baseline birth prevalence – (Proportional reduction of uncontrolled cases of CHT X Baseline birth prevalence)

Overall effect			

Table CHT-NA3c	**Target situation in relation to interventions before birth**		
Intervention	Coverage (%)	Cases averted (n)	Cases averted/1000 LB
Effect of family planning, education			
Effect of iodine fortification			
Effect of iodine supplementation			
Overall effect			

Table CHT-NA3d	**Current situation in relation to interventions after birth**		
Intervention	Coverage (%)	Cases managed (n)	Cases managed/1000 LB
Effect of newborn screening			
Effect of newborn diagnosis			
Treatment services			
Overall effect			

Table CHT-NA3e	Target situation in relation to interventions after birth		
Intervention	Coverage (%)	Cases managed (n)	Cases managed/1000 LB
Effect of newborn screening			
Effect of newborn diagnosis			
Treatment services			
Overall effect			

Table CHT-NA3f	Current and desired outcomes			
	Current situation		**Target situation**	
Indicator	Annual number (n)	Prevalence (n/1000)	Annual number (n)	Prevalence (n/1000)
Estimated affected pregnancies				
Live births (LB)	0	0		
Stillbirths (SB)	0	0		
Total births (LB+SB)	0	0		
Estimated population prevalence				
All age groups				
Estimated mortality / 1000 live births				
Neonatal deaths	0	0		
Infant deaths	0	0		
Under-5 deaths	0	0
