PHG Needs Assessment Calculator
San Marino
Fetal Alcohol Spectrum Disorder

Welcome to the PHG Health Needs Assessment Calculator for Fetal Alcohol Syndrome. The contents of this file are listed below.

Full name of the sheet	Short name
Country demographic, maternal health and socioeconomic indicators	Demography
Country health service data	HealthServices
FASD Epidemiology 1.1: Country epidemiology	FASD-E1.1
FASD Epidemiology 1.2: International comparison	FASD-E1.2
FASD Epidemiology 2.1: Data on affected pregnancies: Research studies	FASD-E2.1
FASD Epidemiology 2.2: Data on affected pregnancies: Surveillance	FASD-E2.2
FASD Epidemiology 2.3: Data on affected pregnancies: Other sources	FASD-E2.3
FASD Epidemiology 2.4: Summary of affected pregnancies	FASD-E2.4
FASD Epidemiology 2.5: Sub-population variation in affected pregnancies	FASD-E2.5
FASD Epidemiology 3.1: Mortality data: Research studies	FASD-E3.1
FASD Epidemiology 3.2: Mortality data: Vital registration data	FASD-E3.2
FASD Epidemiology 3.3: Mortality data: Other sources	FASD-E3.3
FASD Epidemiology 3.4: Summary mortality estimates	FASD-E3.4
FASD Epidemiology 3.5: Sub-population variation in mortality	FASD-E3.5
FASD Epidemiology 4.1: Population prevalence: Research studies	FASD-E4.1
FASD Epidemiology 4.2: Population prevalence: Other sources	FASD-E4.2
FASD Epidemiology 4.3: Summary of population prevalence	FASD-E4.3
FASD Epidemiology 4.4: Sub-population prevalence variation	FASD-E4.4
FASD Interventions 1:Effect of preconception screening and treatment	FASD-Interv1
FASD Needs Assessment Calculator 1: Quantitative baseline	FASD-NA1
FASD Needs Assessment Calculator 3: Quantitative assessment of interventions	FASD-NA3

(There is no sheet FASD-NA2.)

Please note: Throughout the Tool and Calculator we have asked for epidemiological data in relation to Fetal Alcohol Syndrome (FAS) only. This is due to paucity of data and the fact that FAS is the most clinically recognisable form. Please be aware that FAS is the severe presentation of the spectrum of FASD and it is likely that FAS data will be underestimates if you are considering all forms of FASD. You may use the same template to compile data on FASD; however, please be aware that comparability with other data sets will be affected if differing diagnostic criteria have been used.

TB = total births (live births + stillbirths)

San Marino
Fetal Alcohol Spectrum Disorder
FAS Epidemiology 2.4: Summary of affected pregnancies

Indicator	Your estimates	Range	PHGDB minimum estimates	Chosen estimates	Range	Source
Number of annual affected **live births**						
Annual birth prevalence / 1000 TB						
Number of annual affected **still births**						
Annual Stillbirth prevalence / 1000 TB						

If there are specific sub-types of condition, you can repeat this exercise below. However, you should consider (a) whether sub-types would have different implications for advocacy, and (b) whether a sub-type might require a full, specific needs assessment.

TB = total births (live births + stillbirths)

San Marino
Fetal Alcohol Spectrum Disorder
FAS Epidemiology 2.5: Sub-population variation in affected pregnancies

If the birth prevalence rates vary by population sub-group (e.g. geographically or by another factor), indicate any population groups with different prevalence estimates from the whole population and describe reasons for variation. If a group is substantially different from the general population, you may wish to conduct a needs assessment for that group alone.

Population sub-group	Number of affected live births	LB prevalence / 1000 TB	Reason for variation

Population sub-group	Number of affected stillbirths	SB prevalence / 1000 TB	Reason for variation

TB = total births (live births + stillbirths)

San Marino
Fetal Alcohol Spectrum Disorder
FAS Epidemiology 3.1: Mortality data: Research studies

Source, year, site	Sample size	Age group	Study quality and representativeness	Main findings

Based on the studies above, enter the best estimates for the specific mortality by age-group e.g. infant, under-5s, etc., as appropriate, and a range of values to reflect uncertainty of estimates and within-country variation.

If studies are not representative of the national population you may need to weight your data (see the Guide for explanation on weighting and help with the calculations).

LB = live births

San Marino
Fetal Alcohol Spectrum Disorder
FAS Epidemiology 3.2: Mortality data: Vital registration data

Fill in the blank cells based on your vital registration data.	
Enter year and source of data	
Registered data	
Total registered live births	
Registered condition-specific neonatal deaths (first 28 days of life)	
Registered condition-specific infant deaths (first year of life)	
Registered condition-specific under-5 deaths (first 5 years of life)	
Registered condition-specific neonatal mortality ratio (condition-specific neonatal deaths /(Total registered live births/ 1000))	#DIV/0!
Registered condition-specific infant mortality ((condition-specific infant deaths /(Total registered live births/ 1000))	#DIV/0!
Registered condition-specific under-5 mortality (condition-specific under-5 deaths / (Total registered live births/ 1000))	#DIV/0!

Adjustment for under-ascertainment of cause of death and sub-registration of deaths: Enter estimates in the highlighted cells. It is not always possible to adjust the estimates, in which case you may give the value '1', accepting that the estimates in these cases will usually be biased towards low values. (Or you may move to the next section.)
It is assumed that under-ascertainment is stable across age-groups; if ascertainment varies by age-group, you could use separate estimates for each age group.

Estimated completeness of recording: what proportion of deaths in affected persons were registered as such?		Range: 0 to 1
Population coverage: what proportion of the total country/territory population is covered by the vital registration?		Range: 0 to 1
Death ascertainment (population coverage x completeness)	0	
Estimated values for the total country/ territory population		
Estimated number of live births in total population (Total registered live births/population coverage)	#DIV/0!	
Estimated number of neonatal deaths in total population (number of deaths registered in neonatal period / ascertainment)	#DIV/0!	
Estimated number of infant deaths in total population (number of deaths registered in first year of life / ascertainment)	#DIV/0!	
Estimated number of under-5 deaths in total population (number of deaths registered in under-5s / ascertainment)	#DIV/0!	
Estimated neonatal mortality ratio (estimated neonatal deaths / 1000 live births)	#DIV/0!	
Estimated infant mortality ratio (estimated infant deaths / 1000 live births)	#DIV/0!	
Estimated under-5 mortality ratio (estimated under-5 deaths / 1000 live births)	#DIV/0!
