PHG Needs Assessment Calculator
Iran, Islamic Republic of
Neural Tube Defects

Welcome to the PHG Health Needs Assessment Calculator for Neural Tube Defects. The contents of this file are listed below.

Full name of the sheet	Short name
Country demographic, maternal health and socioeconomic indicators	Demography
Country health service data	HealthServices
NTD Epidemiology 1.1: Country epidemiology	NTD-E1.1
NTD Epidemiology 1.2: International comparison	NTD-E1.2
NTD Epidemiology 2.1: Data on affected pregnancies: Research studies	NTD-E2.1
NTD Epidemiology 2.2: Data on affected pregnancies: Surveillance	NTD-E2.2
NTD Epidemiology 2.3: Data on affected pregnancies: Other sources	NTD-E2.3
NTD Epidemiology 2.4: Summary of affected pregnancies	NTD-E2.4
NTD Epidemiology 2.5: Sub-population variation in affected pregnancies	NTD-E2.5
NTD Epidemiology 3.1: Mortality data: Research studies	NTD-E3.1
NTD Epidemiology 3.2: Mortality data: Vital registration data	NTD-E3.2
NTD Epidemiology 3.3: Mortality data: Other sources	NTD-E3.3
NTD Epidemiology 3.4: Summary mortality estimates	NTD-E3.4
NTD Epidemiology 3.5: Sub-population variation in mortality	NTD-E3.5
NTD Epidemiology 4.1: Population prevalence: Research studies	NTD-E4.1
NTD Epidemiology 4.2: Population prevalence: Other sources	NTD-E4.2
NTD Epidemiology 4.3: Summary of population prevalence	NTD-E4.3
NTD Epidemiology 4.4: Sub-population prevalence variation	NTD-E4.4
NTD Interventions 1: Effect of folic acid fortification	NTD-Interv1
NTD Interventions 2: Effect of folic acid supplementation	NTD-Interv2
NTD Interventions 3: Effects of prenatal screening and pregnancy termination	NTD-Interv3
NTD Interventions 4: Combined effects of folic acid interventions and prenatal screening	NTD-Interv4
NTD Needs Assessment Calculator 1: Quantitative baseline	NTD-NA1
NTD Needs Assessment Calculator 3: Quantitative assessment of interventions	NTD-NA3
NTD Needs Assessment Appendix: Regression estimating effect of folate fortification	NTD-Appx

(There is no sheet NTD-NA2.)

Health Services Data

Please read first! If you have already completed a needs assessment for a different topic in this country, you will be able to copy the Health Services information from that Calculator into here. The information should be the same.

This section provides health-service-related information for your country.
By default, the Toolkit contains information at the national level.
If you would like to use a different population, then replace country information with that of your specific population of interest.

Health Expenditure	Estimate	Source, Year	Your estimate	Source, Year	Chosen estimate	Source, Year
Per capita total expenditure on health (PPP int. $)	685	WHO, 2009				
Total expenditure on health as percentage of GDP	5.5	WHO, 2009				
Per capita government expenditure on health (PPP int. $)	267	WHO, 2009				
External resources for health as percentage of total expenditure on health	0	WHO, 2009				
General government expenditure on health as percentage of total expenditure on health	39.0	WHO, 2009				
Out-of-pocket expenditure as percentage of private expenditure on health	96.6	WHO, 2009				
Private expenditure on health as percentage of total expenditure on health	61.0	WHO, 2009				
General government expenditure on health as percentage of total government expenditure	8.7	WHO, 2009				

Health Workforce	Estimate	Source, Year	Your estimate	Source, Year	Chosen estimate	Source, Year
Number of nursing and midwifery personnel	98020	WHO, 2005				
Nursing and midwifery personnel density (per 10,000 population)	16	WHO, 2005				
Number of physicians	61870	WHO, 2005				
Physician density (per 10,000 population)	8.9	WHO, 2005				
Number of obstetricians						
Number of paediatricians						
Number of paediatric surgeons						
Number of paediatric cardiac surgeons						
Number of paediatric neurosurgeons						
Number of clinical geneticists						
Number of genetic counsellors						
Number of community health workers						
Number of skilled birth attendants (SBA)						
Density of SBA						
Number of lab staff providing cytogenetic testing						

Number of lab staff providing molecular genetics						
Number of lab staff providing biochemical tests for genetics						
Number of skilled health attendants						

Infrastructure	Estimate	Source, Year	Your estimate	Source, Year	Chosen estimate	Source, Year
Number of maternity units						
Number of services providing specialised care for people with CD						
Number of family planning services						
Number of preconception services						
Number of services providing prenatal care						
Number of services providing newborn care						
Number of facilities providing genetic services						
Number of laboratories providing cytogenetics						
Number of laboratories providing molecular genetics						
Number of laboratories providing biochemical tests for genetics						
Number of facillities for safe terminations of pregnancies for fetal defects						

PPP = purchasing power parity
GDP = gross domestic product
SBA = skilled birth attendant
CD = congenital disorders

Neural Tube Defects
NTD Epidemiology 2.3: Data on affected pregnancies: Other sources

	Source 1:	**Source 2:**	Notes
Enter year and source of data – use last year with information available.			
Basic Numbers			
Number of affected live births / year, from data source			
Total number of live births / year, from data source			
Number of affected still births / year, from data source			
Total number of stillbirths / year, from data source			
Number of ToP for affected fetus / year from data source			
Total number of affected births / year (live and still)	0	0	
Total number of births / year, from data source	0	0	
Total number of ToP / year, from data source			
Total number of women aged 15-44			
Live birth prevalence: recorded and estimated			
Recorded live birth prevalence (affected recorded live births / 1000 recorded total births)	#DIV/0!	#DIV/0!	
Estimated completeness of recording: what proportion of true affected live births in your data source were recorded?			Range: 0 to 1
Estimated coverage of recorded live births (number of recorded live births / total live births in country or territory)			Range: 0 to 1
Estimated live birth prevalence (recorded prevalence / completeness)	#DIV/0!	#DIV/0!	
Estimated true number of affected live births in data source (number of recorded affected live births / completeness)	#DIV/0!	#DIV/0!	
Estimated number of affected live births in total population (number of affected live births from data source / (coverage x completeness))	#DIV/0!	#DIV/0!	
Stillbirth prevalence: recorded and estimated			
Recorded stillbirth prevalence (affected recorded still births / 1000 recorded total births)	#DIV/0!	#DIV/0!	
Estimated completeness of recording: what proportion of true affected stillbirths in your data source were recorded?			Range: 0 to 1
Estimated coverage of recorded stillbirths (number of recorded still births / total still births in country or territory)			Range: 0 to 1
Estimated stillbirth prevalence (recorded prevalence / completeness)	#DIV/0!	#DIV/0!	
Estimated true number of affected stillbirths in data source (number of recorded affected still births / completeness)	#DIV/0!	#DIV/0!	

Estimated number of affected stillbirths in total population (number of affected still births from data source / (coverage x completeness))	#DIV/0!	#DIV/0!

ToP prevalence: recorded and estimated			
Recorded ToP prevalence (ToP in affected fetuses / 1000 women aged 15-44)	#DIV/0!	#DIV/0!	
Estimated completeness of recording: what proportion of true affected pregnancy terminations in your data source were recorded?			Range: 0 to 1
Estimated coverage of recorded ToP (number of recorded ToP / total ToP in country or territory)			Range: 0 to 1
Estimated ToP prevalence (recorded prevalence / estimated completeness)	#DIV/0!	#DIV/0!	
Estimated true number of ToP in data source (number of recorded ToP / completeness)	#DIV/0!	#DIV/0!	
Estimated number of ToP in total population (number of ToP from data source / (coverage x completeness))	#DIV/0!	#DIV/0!	

Based on the sources above, enter the best prevalence estimates for your population, and a range of values to reflect uncertainty of estimates and within country variation.

If studies are not representative of the national population you may need to weight your data (see the Guide for explanation on weighting and help with the calculations).

Higher estimate		

TB = total births (live births + stillbirths); ToP = termination of pregnancy

Iran, Islamic Republic of
Neural Tube Defects
NTD Epidemiology 2.4: Summary of affected pregnancies

Indicator	Your estimates	Range	PHGDB minimum estimates	Chosen estimates	Range	Source
Number of annual affected **live births**			2,737			
Annual birth prevalence / 1000 TB			2.09			
Number of annual affected **still births**			926			
Stillbirth prevalence / 1000 TB/year			0.71			
Number of **terminations of pregnancy** in affected fetuses /year			0			
Affected ToP / 1000 TB			0.00			

If there are specific sub-types of condition, you can repeat this exercise below. However, you should consider (a) whether sub-types would have different implications for advocacy, and (b) whether a sub-type might require a full, specific needs assessment.

TB = total births (live births + stillbirths); ToP = termination of pregnancy

Iran, Islamic Republic of
Neural Tube Defects
NTD Epidemiology 2.5: Sub-population variation in affected pregnancies

If the birth prevalence rates vary by population sub-group (e.g. geographically or by another factor), indicate any population groups with different prevalence estimates from the whole population and describe reasons for variation. If a group is substantially different from the general population, you may wish to conduct a needs assessment for that group alone.

Population sub-group	Number of affected live births	LB prevalence / 1000 TB	Reason for variation

Population sub-group	Number of affected stillbirths	SB prevalence / 1000 TB	Reason for variation

Population sub-group	Number of ToP in affected pregnancies	ToP prevalence / 1000 TB	Reason for variation

TB = total births (live births + stillbirths); ToP = termination of pregnancy

Iran, Islamic Republic of
Neural Tube Defects
NTD Epidemiology 3.1: Mortality data: Research studies

Source, year, site	Sample size	Age group	Study quality and representativeness	Main findings

Based on the studies above, enter the best estimates for the specific mortality by age-group e.g. infant, under-5s, etc., as appropriate, and a range of values to reflect uncertainty of estimates and within-country variation.

If studies are not representative of the national population you may need to weight your data (see the Guide for explanation on weighting and help with the calculations).

Mortality estimates	Number of deaths	Ratio (deaths / 1000 LB)	Comments

LB = live births

Iran, Islamic Republic of
Neural Tube Defects
NTD Epidemiology 3.2: Mortality data: Vital registration data

Fill in the blank cells based on your vital registration data.	
Enter year and source of data	
Registered data	
Total registered live births	
Registered condition-specific neonatal deaths (first 28 days of life)	
Registered condition-specific infant deaths (first year of life)	
Registered condition-specific under-5 deaths (first 5 years of life)	
Registered condition-specific neonatal mortality ratio (condition-specific neonatal deaths / 1000 live births in the same year)	#DIV/0!
Registered condition-specific infant mortality (condition-specific infant deaths / 1000 live births in the same year)	#DIV/0!
Registered condition-specific under-5 mortality (condition-specific under-5 deaths / 1000 live births in the same year)	#DIV/0!

***Adjustment for under-ascertainment of cause of death and sub-registration of deaths*:** Enter estimates in the highlighted cells. It is not always possible to adjust the estimates, in which case you may give the value '1', accepting that the estimates in these cases will usually be biased towards low values. (Or you may move to the next section.)
It is assumed that under-ascertainment is stable across age-groups; if ascertainment varies by age-group, you could use separate estimates for each age group.

Estimated completeness of recording: what proportion of deaths in affected persons were registered as such?		Range: 0 to 1
Population coverage: what proportion of the total country/territory population is covered by the vital registration?		Range: 0 to 1
Death ascertainment (population coverage x completeness)	0	
Estimated values for the total country/ territory population		
Estimated number of live births in total population	#DIV/0!	
Estimated number of neonatal deaths in total population (number of deaths registered in neonatal period / ascertainment)	#DIV/0!	
Estimated number of infant deaths in total population (number of deaths registered in first year of life / ascertainment)	#DIV/0!	
Estimated number of under-5 deaths in total population (number of deaths registered in under-5s / ascertainment)	#DIV/0!	
Estimated neonatal mortality ratio (estimated neonatal deaths / 1000 live births)	#DIV/0!	
Estimated infant mortality ratio (estimated infant deaths / 1000 live births)	#DIV/0!	
Estimated under-5 mortality ratio (estimated under-5 deaths / 1000 live births)	#DIV/0!

Neural Tube Defects
NTD Epidemiology 4.4: Sub-population prevalence variation

Population sub-group	Number of affected people	Total number of people in population sub-group	Population prevalence per 1000 people	Reason for variation
			#DIV/0!	
			#DIV/0!	
			#DIV/0!	
			#DIV/0!	

If there are specific sub-types of condition, you can repeat this exercise (copy table and paste below). However, you should consider (a) whether sub-types would have different implications for advocacy, and (b) whether a sub-type might require a full, specific needs assessment.

Formula in column D: Number of affected people/ (Total number of people in population subgroup/1000)

Iran, Islamic Republic of
Neural Tube Defects
NTD Interventions 1: Effect of folic acid fortification

This sheet allows you to estimate the potential reduction in NTD prevalence through fortification of food with folic acid.
Please start by entering values reflecting your current situation. If you have no fortification programme, enter 0 for coverage.
Below, you may adjust dosage and coverage levels to demonstrate the effects of different intervention scenarios.

Current situation		Notes
Present estimated NTD prevalence per 1000 TB		
Present dosage (ppm)		Range: 1.5 to 3
Present coverage of fortification		Range: 0 to 1
Baseline NTD prevalence per 1000 TB, with no folic acid fortification*		
Minimum prevalence NTD / 1000 births	0.9	This value is fixed at 0.9

Potential scenarios, based on your present situation		
Vary dosage (ppm)		Range: 1.5 to 3
Vary proportional population coverage		Range: 0 to 1
Estimated NTD prevalence with this scenario, per 1000 TB		<- Do not modify this cell!
Absolute prevalence reduction with this scenario, per 1000 TB		<- Do not modify this cell!

ppm = parts per million
TB = total births (live births + stillbirths)
* Not considering the effects of other interventions on prevalence.

Formula in B13:IF(B10="";"";IF(((B10-(1.07*B12)+(0.15*B11*B12))/(1-0.88*B12))<B15;B15;((B10-(1.07*B12)+(0.15*B11*B12))/(1-0.88*B12))))
Formula in B20: IF(B13="";""; IF(B13=0.9;0.9;IF((1.07*B19+0.12*B13*B19-0.15*(IF(B18="";B11;B18))*B19+B13-B13*B19)<B15;B15;(1.07*B19+0.12*B13*B19-0.15*(IF(B18="";B11;B18))*B19+B13-B13*B19))))
Formula in B21:IF(B20="";"";B13-B20)
See sheet NTD-Appx for explanation of regression.

Iran, Islamic Republic of
Neural Tube Defects
NTD Interventions 2: Effect of folic acid supplementation

This sheet allows you to estimate the potential reduction in NTD incidence through folic acid supplementation for pregnant women.
Please enter a value for population coverage of folic acid supplementation, to determine its potential effect.

Effect of supplementation (with no fortification)		Notes
Baseline prevalence with no folic acid intervention (per 1000 TB)		This can be taken from the appropriate cell (baseline NTD prevalence) in sheet NTD-Interv1.
Maximum proportional reduction (assuming 100% coverage)	0.72	This value is fixed at 0.72
Population supplementation coverage		Range: 0 to 1
Actual proportional reduction	0	Maximum proportional reduction x Coverage
Actual prevalence reduction (per 1000 TB)	0.000	Baseline incidence x Actual proportional reduction
Minimum prevalence	0.9	This value is fixed at 0.9
New prevalence	0.000	Baseline prevalence-((Maximum proportional reduction X Population supplementation coverage) x Baseline prevalence)
% prevalence reduction	#DIV/0!	1 – (New prevalence/Baseline prevalence)
Absolute prevalence reduction (per 1000 TB)	0.000	Baseline prevalence- New prevalence
Final prevalence following supplementation	**0.900**	Cannot go below 0.9 / 1000 LB

Now you can see below the potential combined effect of folate fortification and supplementation:

Additional effect of supplementation, given fortification		This value can be changed.
	New prevalence	
After fortification		This value set in sheet NTD-Interv1
After supplementation		
After fortification and supplementation	0.000	Requires input in blank cells above[1]
% reduction	**#DIV/0!**	Requires input in blank cells above[2]
Final prevalence after fortification and supplementation		

TB = total births (live births + stillbirths)

[1]New Prevalence after fortification-(Additional effect of supplementation x Final prev. following supplemen.)

[2]If New prevalence after fortification < minimum prevalence then use (Baseline prev – min prevalence)/baseline prevalence)
Otherwise use: (Baseline prevalence – new prevalence after fortification and supplementation)/baseline prevalence

Iran, Islamic Republic of
Neural Tube Defects
NTD Interventions 3: Effect of prenatal screening and pregnancy termination

Assumption: prenatal services are equally used for cases which would lead to still births and live births.
This could overestimate the impact of ToP if in fact ToP is more likely for severe cases that would result in stillbirth.
Conversely, the impact of ToP could be underestimated if screening is only available to high-income women at lower risk.
100% specificity of prenatal diagnosis assumed.

Baseline prevalence, per 1000 TB (LB + SB)		See previous two sheets. Use baseline either before or after folic acid interventions.
Variables		
Coverage of prenatal screening		Range: 0 to 1
Proportion of screen-positive cases receiving diagnosis		Range: 0 to 1
Proportion of diagnosed cases ending in pregnancy termination		Range: 0 to 1
Results		
% prevalence reduction due to PND & pregnancy termination[1]	0%	
Prevalence reduction due to PND & pregnancy termination, per 1000 TB[2]	0.000	
Final birth prevalence of NTDs after PND & pregnancy termination, per 1000 TB[3]	0.000	

PNS = prenatal screening
ToP = termination of pregnancy
TB = total births (live births + still births)

[1]Coverage of screening X Proportion of screen-positive cases receiving diagnosis x Proportion of cases ending in pregnancy termination
[2]% prevalence reduction due to PND and termination x Baseline prevalence
[3]Baseline prevalence – Prevalence reduction due to PND & termination

Neural Tube Defects
NTD Interventions 4: Combined effects of folic acid interventions and prenatal screening

This sheet will only work if the previous three sheets (NTD-Interv1, 2 3) have been completed.

Variables		Notes
Baseline prevalence (per 1000 TB)		See e.g. Baseline prior to FA interventions in sheet NTD-Interv1
Prevalence reduction through FA interventions (per 1000 TB)	0.000	Set in sheet NTD-Interv2
% prevalence reduction after folic acid[1]	#VALUE!	
Coverage of prenatal diagnosis	0	Set in sheet NTD-Interv3
Prevalence of pregnancy termination in confirmed cases	0	Set in sheet NTD-Interv3
Prevalence reduction through PNS	0.000	Set in sheet NTD-Interv3
% prevalence reduction due to PNS[2]	0%	
Final prevalence after folic acid and PNS (per 1000 TB)[3]	**0.000**	
Combined prevalence reduction (per 1000 TB)[4]	0.000	
Combined % prevalence reduction[5]	#VALUE!	

PNS = prenatal screening
TB = total births (live births + stillbirths)
FA = folic acid

[1]Prevalence reduction through FA interventions/Baseline prevalence
[2]Coverage of prenatal diagnosis x Prevalence of pregnancy termination of confirmed cases
[3]Baseline prevalence = Prevalence reduction through FA interventions – Prevalence reduction through PNS
[4] Baseline prevalence – Final prevalence after folic acid and PNS
[5]1- (Final prevalence after folic acid and PNS/Baseline prevalence)

NTD Needs assessment appendix: Regression estimating effect of folic acid fortification

Data from Wald et al.[1] was used to create a regression. The following output, adapted from Stata, gives the basis for the formula used in cell B13 of sheet NTD-Interv1.
Due to the use of a limited data set, the regression is accurate within a limited range.

Command
regress incid baseline ppm

Output

Source	SS	df	MS	Number of obs = 12
Model	0.282	2	0.141	Prob > F = 0.0164
Residual	0.188	9	0.021	R-squared = 0.5991
				Adj R-squared = 0.5100
Total	0.470	11	0.043	Root MSE = .14468

incid	Coef.	Std. Err.	t	P>|t|	95% Conf.	Interval
baseline	**0.121**	0.071	1.69	0.12	-0.041	0.283
ppm	**-0.154**	0.047	3.25	0.010	-0.261	-0.047
_cons	**1.072**	0.164	6.52	0.000	0.700	1.444

Prevalence = (0.12 x baseline prevalence) – (0.15 x ppm) + 1.07
