# **PHG Needs Assessment Calculator**

Mali

## **Congenital Heart Disease**

Welcome to the PHG Health Needs Assessment Calculator for Congenital Heart Disease. The contents of this file are listed below.

Full name of the sheet	Short name
Country demographic, maternal health and socioeconomic indicators	Demography
Country health service data	HealthServices
CHD Epidemiology 1.1: Country epidemiology	CHD-E1.1
CHD Epidemiology 1.2: International comparison	CHD-E1.2
CHD Epidemiology 2.1: Data on affected pregnancies: Research studies	CHD-E2.1
CHD Epidemiology 2.2: Data on affected pregnancies: Surveillance	CHD-E2.2
CHD Epidemiology 2.3: Data on affected pregnancies: Other sources	CHD-E2.3
CHD Epidemiology 2.4: Summary of affected pregnancies	CHD-E2.4
CHD Epidemiology 2.5: Sub-population variation in affected pregnancies	CHD-E2.5
CHD Epidemiology 3.1: Mortality data: Research studies	CHD-E3.1
CHD Epidemiology 3.2: Mortality data: Vital registration data	CHD-E3.2
CHD Epidemiology 3.3: Mortality data: Other sources	CHD-E3.3
CHD Epidemiology 3.4: Summary mortality estimates	CHD-E3.4
CHD Epidemiology 3.5: Sub-population variation in mortality	CHD-E3.5
CHD Epidemiology 4.1: Population prevalence: Research studies	CHD-E4.1
CHD Epidemiology 4.2: Population prevalence: Other sources	CHD-E4.2
CHD Epidemiology 4.3: Summary of population prevalence	CHD-E4.3
CHD Epidemiology 4.4: Sub-population prevalence variation	CHD-E4.4
CHD Interventions 1: Effect of folic acid fortification	CHD-Interv1
CHD Interventions 2: Effect of folic acid supplementation	CHD-Interv2
CHD Interventions 3: Effects of prenatal screening and pregnancy management	CHD-Interv3
CHD Needs Assessment Calculator 1: Quantitative baseline	CHD-NA1
CHD Needs Assessment Calculator 3: Quantitative assessment of interventions	CHD-NA3

(There is no sheet CHD-NA2.)

Note: The Calculator sheets already contain modelled estimates from the PHGDB; note that these estimates do not include CHD associated with chromosomal disorders (e.g. Down's syndrome) and other non-cardiac malformations.

**Shared Data** 

Demographic, maternal health and socio-economic indicators

Please read first! If you have already completed a needs assessment for a different topic in this country, you will be able to copy the Demography information from that Calculator into here. The information should be the same.

By default, the Toolkit contains information at the national level.

If you would like to use a different population, then replace country information with that of your specific population of interest.

Number of persons by age-group and sex		Estimates		Yo	our estimat	es	Cho	sen estim	ates
Age group	Male	Female	Total	Male	Female	Total	Male	Female	Total

Mali Congenital Heart Disease CHD Epidemiology 2.4: Summary of affected pregnancies

Indicator	Your estimates	Range	PHGDB minimum estimates	Chosen estimates	Range	Source
Number of annual affected live births			2,208			
Annual birth prevalence / 1000 TB			3.25			
Number of annual affected still births			3			
Stillbirth prevalence / 1000 TB/year			0.05			
Number of <b>terminations of pregnancy</b> in affected fetuses /year						
Affected ToP / 1000 TB						

If there are specific sub-types of condition, you can repeat this exercise below. However, you should consider (a) whether sub-types would have different implications for advocacy, and (b) whether a sub-type might require a full, specific needs assessment.

## **Congenital Heart Disease**

# CHD Epidemiology 2.5: Sub-population variation in affected pregnancies

If the birth prevalence rates vary by population sub-group (e.g. geographically or by another factor), indicate any population groups with different prevalence estimates from the whole population and describe reasons for variation. If a group is substantially different from the general population, you may wish to conduct a needs assessment for that group alone.

Population sub- group	Number of affected live births	LB prevalence / 1000 TB	Reason for variation

Population sub- group	Number of affected stillbirths	SB prevalence / 1000 TB	Reason for variation

Number of ToP in affected pregnancies	ToP prevalence / 1000 TB	Reason for variation

## **Congenital Heart Disease**

CHD Epidemiology 3.1: Mortality data: Research studies

Source, year, site	Sample size	Age group	Study quality and representativeness	Main findings

Based on the studies above, enter the best estimates for the specific mortality by age-group e.g. infant, under-5s, etc., as appropriate, and a range of values to reflect uncertainty of estimates and within-country variation.

If studies are not representative of the national population you may need to weight your data (see the Guide for explanation on weighting and help with the calculations).

# Mali Congenital Heart Disease

CHD Epidemiology 3.2: Mortality data: Vital registration data

Fill in the blank cells based on your vital registration data.			
Enter year and source of data			
Registered data			
Total registered live births			
Registered condition-specific neonatal deaths (first 28 days of life)			
Registered condition-specific infant deaths (first year of life)			
Registered condition-specific under-5 deaths (first 5 years of life)			
Registered condition-specific neonatal mortality ratio	#DIV/0!		
(condition-specific neonatal deaths / 1000 live births in the same year)			
Registered condition-specific infant mortality (condition-specific infant deaths / 1000 live births in the same year)	#DIV/0!		
Registered condition-specific under-5 mortality (condition-specific under-5 deaths / 1000 live births in the same	#DIV/0!		
year)			

Adjustment for under-ascertainment of cause of death and sub-registration of deaths: Enter estimates in the highlighted cells. It is not always possible to adjust the estimates, in which case you may give the value '1', accepting that the estimates in these cases will usually be biased towards low values. (Or you may move to the next section.) It is assumed that under-ascertainment is stable across age-groups; if ascertainment varies by age-group, you could use separate estimates for each age group.

Estimated completeness of recording: what proportion of deaths in affected persons were registered as such?		Range: 0 to 1
Population coverage: what proportion of the total country/territory population is covered by the vital registration?		Range: 0 to 1
Death ascertainment (population coverage x completeness)	0	
Estimated values for the total country/ territory population		
Estimated number of live births in total population	#DIV/0!	
Estimated number of neonatal deaths in total population	#DIV/0!	
(number of deaths registered in neonatal period / ascertainment)		
Estimated number of infant deaths in total population	#DIV/0!	!
(number of deaths registered in first year of life / ascertainment)		
Estimated number of under-5 deaths in total population	#DIV/0!	!
(number of deaths registered in under-5s / ascertainment)		
Estimated neonatal mortality ratio (estimated neonatal deaths / 1000 live births)	#DIV/0!	
Estimated infant mortality ratio (estimated infant deaths / 1000 live births)	#DIV/0!	
Estimated under-5 mortality ratio (estimated under-5 deaths / 1000 live births)	#DIV/0!

Population sub-group	Number of affected people	 Population prevalence per 1000 people	Reason for variation
		#DIV/0!	

If there are specific sub-types of condition, you can repeat this exercise (copy table and paste below). However, you should consider (a) whether sub-types would have different implications for advocacy, and (b) whether a sub-type might require a full, specific needs assessment.

Formula in column D: Number of affected people/ (Total number of people in population subgroup/1000)

### **Congenital Heart Disease**

#### CHD Interventions 1: Effect of folic acid fortification

This sheet allows you to estimate the potential reduction in CHD prevalence through fortification of food with folic acid. Please start by entering values reflecting your current situation. If you have no fortification programme, enter 0 for coverage. Below, you may adjust dosage and coverage levels to demonstrate the effects of different intervention scenarios.

Current situation	Notes
Present estimated CHD prevalence per 1000 TB	
Present dosage (ppm)	Range: 1.5 to 3
Present coverage of fortification	Range: 0 to 1
Baseline CHD prevalence per 1000 TB, with no folic acid fortification*1	

Potential scenarios, based on your present situation	
Vary dosage (ppm)	Range: 1.5 to 3
Vary proportional population coverage Estimated reduction in CHDs through folic acid fortification, per 1000	Range: 0 to 1
Estimated reduction in CHDs through folic acid fortification, per 1000 TB <sup>2</sup>	0.000 Do not delete this value!
Resulting prevalence of CHDs after folic acid fortification, per 1000 TB <sup>3</sup>	0.000 Do not delete this value!

ppm = parts per million

TB = total births (live births + still births)

The regression formula underlying the effect on neural tube defects is given in the NTD Calculator in this Toolkit.

<sup>\*</sup> The effect of folic acid on CHD is assumed to be 25% of the effect on neural tube defects.

<sup>\*\*</sup> Not considering the effects of other interventions on prevalence.

<sup>&</sup>lt;sup>1</sup>(Present estimated prevalence-(1.07\*coverage\*0.25)+(0.15\*ppm\*coverage\*0.25))/(1-0.88\*coverage\*0.25)))

<sup>&</sup>lt;sup>2</sup>((0.25\*(Baseline CHD-(1.07\*coverage+0.12\*baseline CHD\*coverage-0.15\*dosage\*coverage+baseline-baseline\*coverage))))

<sup>&</sup>lt;sup>3</sup>Baseline CHD prevalence – estimated reduction in CHD after fortification

## **Congenital Heart Disease**

## CHD Interventions 2: Effect of folic acid supplementation

This sheet allows you to estimate the potential reduction in CHD incidence through folic acid supplementation for pregnant women. Please enter a value for population coverage of folic acid supplementation, to determine its potential effect.

Effect of supplementation (with no fortification)		Notes
Baseline prevalence with no folic acid intervention (per 1000 TB)		This can be taken from the appropriate cell in the previous sheet.
Maximum proportional reduction (assuming 100%		
coverage)	0.18	This value is fixed at 0.18
Population supplementation coverage		Range: 0 to 1
Actual proportional reduction	0	Maximum proportional reduction x Coverage
Actual prevalence reduction (per 1000 TB)	0.000	Baseline prevalence x Actual proportional reduction

New prevalence		Baseline prevalence -((Maximum prop. Reduction x Population supplementation coverage) x Baseline prevalence))
% prevalence reduction	#DIV/0!	1-(New prevalence/Baseline prevalence)
Absolute prevalence reduction (per 1000 TB)	0.000	Baseline prevalence -New prevalence

Now you can see below the potential combined effect of folate fortification and supplementation:

Additional effect of supplementation, given fortification	0.1 This value can be changed.

	New prevalence	
After fortification		This can be taken from the appropriate cell above
After supplementation	0.000	Same as new prevalence
After fortification and supplementation		Prevalence after fortification-(Additional effect of supplementation*prevalence after supplementation)

TB = total births (live births + still births)

CHD = congenital heart disease

<sup>1</sup>New Prevalence after fortification-(Additional effect of supplementation x Final prev. following supplemen.)

<sup>2</sup>If New prevalence after fortification < minimum prevalence then use (Baseline prev – min prevalen)/baseline prevalence)

Otherwise use: (Baseline prevalence - new prevalence after fortification and supplementation)/baseline prevalence

Mali

## **Congenital Heart Disease**

# CHD Interventions 3: Effect of prenatal screening and pregnancy management

Baseline prevalence: fetuses affected by CHD, per 1000 TB		See previous sheet. Use baseline prevalence either before or after folic acid fortification and supplementation.
Variables		
Coverage of prenatal screening		Range: 0 to 1
Proportion of diagnosed pregnancies receiving treatment*		Range: 0 to 1
Effectiveness of treatment		Range: 0 to 1
Results		
Proportional reduction of uncontrolled cases of CHD through PNS and treatment <sup>1</sup>	0%	
Prevalence of uncontrolled CHD after PNS and treatment, per 1000 total births <sup>2</sup>	0.000	
Final prevalence: affected live births after PNS & treatment, per 1000 total births <sup>3</sup>	0.000	

PNS = prenatal screening
TB = total births (live births + still births)

CHD = congenital heart disease

<sup>\*</sup>Treatment in this case refers to diagnosis and appropriate management of pregnancy

<sup>&</sup>lt;sup>1</sup>Coverage of screening X Proportion of diagnosed pregnancies receiving treatment X Effectiveness of treatment

<sup>&</sup>lt;sup>2</sup>Proportional reduction of uncontrolled cases x Baseline prevalence

<sup>&</sup>lt;sup>3</sup>Baseline prevalence – prevalence of uncontrolled CHD

### CHD Interventions: Effect of prenatal screening and pregnancy termination

Assumption: prenatal services are equally used for cases which would lead to still births and live births.

This could overestimate the impact of ToP if in fact ToP is more likely for severe cases that would result in stillbirth.

Conversely, the impact of ToP could be underestimated if screening is only available to high-income women at lower risk.

100% specificity of prenatal diagnosis assumed.

Baseline prevalence, per 1000 TB (LB + SB)		See previous two sheets. Use baseline either before or after folic acid interventions.
Variables		
Coverage of prenatal screening		Range: 0 to 1
Proportion of screen-positive cases receiving diagnosis		Range: 0 to 1
Proportion of diagnosed cases ending in pregnancy termination		Range: 0 to 1
Results		
% prevalence reduction due to PND & pregnancy termination <sup>1</sup>	0%	
Prevalence reduction due to PND & pregnancy termination, per 1000 TB <sup>2</sup>	0.000	
Final birth prevalence of CHDs after PND & pregnancy termination, per 1000 TB <sup>3</sup>	0.000	

PNS = prenatal screening

ToP = termination of pregnancy

TB = total births (live births + still births)

<sup>&</sup>lt;sup>1</sup>Coverage of screening X Proportion of screen-positive cases receiving diagnosis x Proportion of cases ending in pregnancy termination

<sup>&</sup>lt;sup>2</sup>% prevalence reduction due to PND and termination x Baseline prevalence

<sup>&</sup>lt;sup>3</sup>Baseline prevalence – Prevalence reduction due to PND & termination
