PHG Needs Assessment Calculator
Timor-Leste
Newborn screening

Welcome to the PHG Health Needs Assessment Calculator for Newborn Screening. The contents of this file are listed below.

| Full name of the sheet | Short name |
| :--- | :--- |
| Country demographic, maternal health and socioeconomic indicators | Demography |
| Country health-service indicators | HealthServices |
| Existing screening programmes for congenital disorders | NBS-NA1.1 |
| Details of newborn screening programmes | NBS-NA1.2 |
| Effect of newborn screening and treatment on congenital hypothyroidism | NBS-CHT |
| Effect of newborn screening and treatment on G6PD deficiency | NBS-G6PD |
| Effect of newborn screening and treatment on Rhesus haemolytic disease of newborn | NBS-RHD |
| Effect of newborn screening and management on sickle cell disease | NBS-SCD |
| Effect of newborn screening and management on thalassaemias | NBS-THAL |
| Effect of newborn screening and treatment on orofacial clefts | NBS-OFC |
| Effect of newborn screening and treatment on phenylketonuria | NBS-PKU |
| Effect of newborn screening and management on cystic fibrosis | NBS-CF |

## Timor-Leste

Shared Data
Demographic, maternal health and socio-economic indicators
Please read first! If you have already completed a needs assessment for a different topic in this country, you will be able to copy the
Demography information from that Calculator into here. The information should be the same

By default, the Toolkit contains information at the national level.
If you would like to use a different population, then replace country information with that of your specific population of interest.

| Number of persons by age-group and sex |  | Estimates |  |  | estimates |  | Cho | en estim |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Age group | Male | Female | Total | Male | Female | Total | Male | Female | Total |
| 0-4 years | 825789 | 830931 | 1656720 |  |  | 0 |  |  | 0 |
| 5-9 years | 729181 | 731901 | 1461082 |  |  | 0 |  |  | 0 |
| 10-14 years | 601279 | 604367 | 1205646 |  |  | 0 |  |  | 0 |
| 15-19 years | 513320 | 556676 | 1069996 |  |  | 0 |  |  | 0 |
| 20-24 years | 416083 | 492589 | 908672 |  |  | 0 |  |  | 0 |

PPP = purchasing power parity
GDP = gross domestic product
SBA = skilled birth attendant
$C D=$ congenital disorders

Timor-Leste
Newborn screening
Existing screening programmes for congenital disorders

| Condition | Tick if NBS programme exists | Tick if included in physical examination | Indicate whether NBS is provided a national or subnational level | Condition prevalence per 1000 newborns | Prevalence variation and high-risk populations |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Eye problems |  |  |  |  |  |
| Signs of heart disease |  |  |  |  |  |
| Developmental dysplasia of hips |  |  |  |  |  |
| Genital anomalies (e.g. undescended testicles) |  |  |  |  |  |
| Orofacial clefts |  |  |  |  |  |
| Dysmorphologies |  |  |  |  |  |
| Hearing loss |  |  |  |  |  |
| Congenital hypothyroidism |  |  |  |  |  |
| G6PD deficiency |  |  |  |  |  |
| PKU |  |  |  |  |  |
| Cystic fibrosis |  |  |  |  |  |
| Thalassaemias |  |  |  |  |  |
| Sickle cell disease |  |  |  |  |  |
| MCADD |  |  |  |  |  |
| CAH |  |  |  |  |  |
| Other |  |  |  |  |  |

NBS = newborn screening
G6PD = glucose-6-phosphate dehydrogenase
PKU = phenylketonuria
CAH= congenital adrenal hyperplasia
MCADD = medium-chain acyl-CoA dehydrogenase deficiency

Timor-Leste
Newborn screening
Details of newborn screening programmes

| Condition | Age at screen | Coverage (\%) | Coverage variation and high-risk populations | Estimated proportio affected newborns detected | Target coverage (\%) |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Newborn physical examination |  |  |  |  |  |
| Basic examination* |  |  |  |  |  |
| Examination for gross abnormalities* |  |  |  |  |  |
| Detailed physical examination |  |  |  |  |  |
| Newborn hearing screening |  |  |  |  |  |
| Crude screening |  |  |  |  |  |
| Equipment based screening |  |  |  |  |  |
| Newborn bloodspot screening |  |  |  |  |  |
| Congenital hypothyroidism |  |  |  |  |  |
| PKU |  |  |  |  |  |
| Cystic fibrosis |  |  |  |  |  |
| Sickle cell disease |  |  |  |  |  |
| G6PD deficiency |  |  |  |  |  |
| MCADD |  |  |  |  |  |
| CAH |  |  |  |  |  |
| Other |  |  |  |  |  |

PKU = phenylketonuria
G6PD = glucose-6-phosphate dehydrogenase
MCADD = medium-chain acyl-CoA dehydrogenase deficiency
CAH= congenital adreanal hyperplasia

* As defined in the Background document section titled Newborn Screening Tests

## Timor-Leste

Newborn screening
Effects of NBS and treatment on congenital hypothyroidism

LB = live births
CHT = congenital hypothyroidism
NBS = newborn screening

* If you don't have data on birth prevalence but do have data on screening, you can estimate birth prevalence by combining the proportion screened positive with the number of total births. (This assumes that screening is randomly distributed in the population).
${ }^{1}$ Coverage of newborn screening X Proportion of screen-positive cases receiving treatment X Effectiveness of treatment
${ }^{2}$ Baseline birth prevalence - (Proportional reduction of uncontrolled cases of CHT X Baseline birth prevalence)

## Timor-Leste

Newborn screening
Effects of NBS and treatment on G6PD deficiency

| Baseline birth prevalence of G6PD deficiency, per 1000 LB |  |  |
| :---: | :---: | :---: |
| Variables |  |  |
| Coverage of newborn screening |  | Range: 0 to 1 <br> Range: 0 to 1 <br> Range: 0 to 1 |
| Proportion of positive-screened patients receiving treatment |  |  |
| Effectiveness of treatment |  |  |
| Results |  |  |
| Proportional reduction of uncontrolled cases through NBS and treatment ${ }^{1}$ | 0 |  |
| Prevalence of uncontrolled G6PD deficiency after newborn screening and treatment, per 1000 LB $^{2}$ | 0 |  |

LB = live births
NBS = newborn screening
G6PD = glucose-6-phosphate dehydrogenase

* If you don't have data on birth prevalence but do have data on screening, you can estimate birth prevalence by combining the proportion screened positive with the number of total births. (This assumes that screening is randomly distributed in the population).
${ }^{1}$ Coverage of newborn screening $X$ Proportion of screen-positive cases receiving treatment $X$ Effectiveness of treatment
${ }^{2}$ Baseline birth prevalence - (Proportional reduction of uncontrolled cases of G6PD X Baseline birth prevalence)

## Timor-Leste

Newborn screening
Effects of NBS and treatment on RHD

| Baseline birth prevalence of RHD, per 1000 LB |  |  |
| :---: | :---: | :---: |
| Variables |  |  |
| Coverage of newborn screening |  | Range: 0 to 1 |
| Proportion of positive-screened patients receiving treatment |  | Range: 0 to 1 |
| Effectiveness of treatment |  | Range: 0 to 1 |
| Results |  |  |
| Proportional reduction of uncontrolled cases through NBS and treatment ${ }^{1}$ | 0 |  |
| Prevalence of uncontrolled RHD deficiency after newborn screening and treatment, per 1000 LB $^{2}$ | 0 |  |

LB = live births
NBS = newborn screening
RHD = Rhesus Haemolytic Disease of Newborn

* If you don't have data on birth prevalence but do have data on screening, you can estimate birth prevalence by combining the proportion screened positive with the number of total births. (This assumes that screening is randomly distributed in the population).
${ }^{1}$ Coverage of newborn screening X Proportion of screen-positive cases receiving treatment X
Effectiveness of treatment
${ }^{2}$ Baseline birth prevalence - (Proportional reduction of uncontrolled cases of RHD X Baseline birth prevalence)

## Timor-Leste

Newborn screening
Effects of NBS and management on sickle cell disease

| Baseline birth prevalence of sickle cell disease, per 1000 LB |  |  |
| :---: | :---: | :---: |
| Variables |  |  |
|  |  | Range: 0 to 1 |
| management |  | Range: 0 to 1 |
| Effectiveness of management |  | Range: 0 to 1 |
| Results |  |  |
| Proportional reduction in unmanaged cases of SCD through NBS and treatment ${ }^{1}$ | 0 |  |
| Prevalence of unmanaged sickle cell disease after newborn screening and treatment, per 1000 LB $^{2}$ | 0 |  |

LB = live births
SCD = sickle cell disease
NBS = newborn screening

* If you don't have data on birth prevalence but do have data on screening, you can estimate birth prevalence by combining the proportion screened positive with the number of total births. (This assumes that screening is randomly distributed in the population).
${ }^{1}$ Coverage of newborn screening X Proportion of screen-positive cases receiving treatment X Effectiveness of treatment
${ }^{2}$ Baseline birth prevalence - (Proportional reduction of unmanaged cases of SCD X
Baseline birth prevalence)

## Timor-Leste

Newborn screening
Effects of NBS and management on thalassaemias

LB = live births
NBS = newborn screening

* If you don't have data on birth prevalence but do have data on screening, you can estimate birth prevalence by combining the proportion screened positive with the number of total births. (This assumes that screening is randomly distributed in the population).
${ }^{1}$ Coverage of newborn screening X Proportion of screen-positive cases receiving treatment X Effectiveness of treatment
${ }^{2}$ Baseline birth prevalence - (Proportional reduction of unmanaged cases of thalassaemia $X$ Baseline birth prevalence)

## Timor-Leste

Newborn screening
Effects of NBS and treatment on orofacial clefts

| Baseline birth prevalence of orofacial clefts, per 1000 LB |  |  |
| :---: | :---: | :---: |
| Variables |  |  |
| Coverage of newborn screening |  | Range: 0 to 1 |
| Proportion of screen-positive patients receiving treatment |  | Range: 0 to 1 |
| Effectiveness of treatment |  | Range: 0 to 1 |
| Results |  |  |
| Proportional reduction of prevalence of untreated OFCs through NBS and treatment ${ }^{1}$ | 0 |  |
| Prevalence of untreated OFCs after newborn screening and treatment, per 1000 LB $^{2}$ | 0 |  |

LB = live births
OFCs = orofacial clefts
NBS = newborn screening

* If you don't have data on birth prevalence but do have data on screening, you can estimate birth prevalence by combining the proportion screened positive with the number of total births. (This assumes that screening is randomly distributed in the population),
${ }^{1}$ Coverage of newborn screening X Proportion of screen-positive cases receiving treatment X Effectiveness of treatment
${ }^{2}$ Baseline birth prevalence - (Proportional reduction of untreated cases of OFC X Baseline birth prevalence)

## Timor-Leste

Newborn screening
Effects of NBS and treatment on phenylketonuria

| Baseline birth prevalence of PKU, per 1000 LB |  |  |
| :---: | :---: | :---: |
| Variables |  |  |
| Coverage of newborn screening |  | Range: 0 to 1 <br> Range: 0 to 1 <br> Range: 0 to 1 |
| Proportion of positive-screened patients receiving treatment |  |  |
| Effectiveness of treatment |  |  |
| Results |  |  |
| Proportional reduction of prevalence of clinical cases of PKU through NBS and treatment ${ }^{1}$ | 0 |  |
| Prevalence of symptomatic PKU after newborn screening and treatment, per 1000 LB $^{2}$ | 0 |  |

## LB = live births

PKU = phenylketonuria
NBS = newborn screening

* If you don't have data on birth prevalence but do have data on screening, you can estimate birth prevalence by combining the proportion screened positive with the number of total births. (This assumes that screening is randomly distributed in the population),
${ }^{1}$ Coverage of newborn screening X Proportion of screen-positive cases receiving treatment X Effectiveness of treatment
${ }^{2}$ Baseline birth prevalence - (Proportional reduction of prevalence of clinical cases of PKU X Baseline birth prevalence)

## Timor-Leste

Newborn screening
Effects of NBS and management on cystic fibrosis

| Baseline birth prevalence of cycstic fibrosis, per 1000 LB |  |  |
| :---: | :---: | :---: |
| Variables |  |  |
|  |  | Range: 0 to 1 |
| management |  | Range: 0 to 1 |
| Effectiveness of management |  | Range: 0 to 1 |
| Results |  |  |
| Proportional reduction of prevalence of unmanaged cystic fibrosis through NBS and treatment ${ }^{1}$ | 0 |  |
| Prevalence of unmanaged cystic fibrosis after newborn screening and treatment, per 1000 LB $^{2}$ | 0 |  |

LB = live births
NBS = newborn screening

* If you don't have data on birth prevalence but do have data on screening, you can estimate birth prevalence by combining the proportion screened positive with the number of total births. (This assumes that screening is randomly distributed in the population)
${ }^{1}$ Coverage of newborn screening X Proportion of positive-screened patients referred for management $X$ Effectiveness of management
${ }^{2}$ Baseline birth prevalence - (Proportional reduction of prevalence of unmanaged cases $X$
Baseline birth prevalence)
