Rhesus Haemolytic Disease of the Newborn

Welcome to the PHG Health Needs Assessment Calculator for Rhesus Haemolytic Disease of the Newborn. The contents of this file are listed below:

| Full name of the sheet | Short name |
|---|----------------|
| Country demographic, maternal health and socioeconomic indicators | Demography |
| Country health service data | HealthServices |
| RHD Epidemiology 1.1: Country epidemiology | RHD-E1.1 |
| RHD Epidemiology 1.2: International comparison | RHD-E1.2 |
| RHD Epidemiology 2.1: Data on affected pregnancies: Research studies | RHD-E2.1 |
| RHD Epidemiology 2.2: Data on affected pregnancies: Surveillance | RHD-E2.2 |
| RHD Epidemiology 2.3: Data on affected pregnancies: Other sources | RHD-E2.3 |
| RHD Epidemiology 2.4: Summary of affected pregnancies | RHD-E2.4 |
| RHD Epidemiology 2.5: Sub-population variation in affected pregnancies | RHD-E2.5 |
| RHD Epidemiology 3.1: Mortality data: Research studies | RHD-E3.1 |
| RHD Epidemiology 3.2: Mortality data: Vital registration data | RHD-E3.2 |
| RHD Epidemiology 3.3: Mortality data: Other sources | RHD-E3.3 |
| RHD Epidemiology 3.4: Summary mortality estimates | RHD-E3.4 |
| RHD Epidemiology 3.5: Sub-population variation in mortality | RHD-E3.5 |
| RHD Epidemiology 4.1: Population prevalence: Research studies | RHD-E4.1 |
| RHD Epidemiology 4.2: Population prevalence: Other sources | RHD-E4.2 |
| RHD Epidemiology 4.3: Summary of population prevalence | RHD-E4.3 |
| RHD Epidemiology 4.4: Sub-population prevalence variation | RHD-E4.4 |
| RHD Interventions 1: Prenatal screening and treatment | RHD-Interv1 |
| RHD Interventions 2: Newborn screening and treatment | RHD-Interv2 |
| RHD Needs Assessment Calculator 1: Quantitative baseline | RHD-NA1 |
| RHD Needs Assessment Calculator 3: Quantitative assessment of interventions | RHD-NA3 |

(There is no sheet RHD-NA2.)

Rhesus Haemolytic Disease of the Newborn

RHD Epidemiology 2.1: Data on affected pregnancies: Research studies

| Study author, year, site | Sample size | Study quality and representativeness | Main findings |
|--------------------------|-------------|--------------------------------------|---------------|
| | | | |
| | | | |
| | | | |
| | | | |

Based on the studies listed above (or in section RHD-E2.1 of the Tool), enter the best estimates for the prevalence of affected births and terminations in the country, and a range of values to reflect uncertainty or within-country variation.

If studies are not representative of the national population you may need to weight your data (see the Guide for explanation on weighting and help with the calculations).

| Estimates for the total country/territory | Number of affected live births | LB prevalence / 1000 TB | Comments |
|---|--------------------------------|-------------------------|----------|
| Best estimate | | | |
| Lower estimate | | | |
| Higher estimate | | | |
| Estimates for the total country/territory | Number of affected stillbirths | SB prevalence / 1000 TB | Comments |
| Best estimate | | | |
| Lower estimate | | | |
| Higher estimate | | | |

TB = total births (live births + stillbirths);

El Salvador

Rhesus Haemolytic Disease of the Newborn

RHD Epidemiology 2.2: Data on affected pregnancies: Surveillance

Based on surveillance data, enter the best estimates for the prevalence of the condition in live births and still births. Give a range of values to reflect uncertainty and within-country variation, and use comments for information on data quality, uncertainty and representativeness.

If studies are not representative of the national population you may need to weight your data (see the Guide for explanation on weighting and help with the calculations).

| Estimates for the total country/territory | Number of affected live births | Birth prevalence / 1000 TB | Comments |
|---|--------------------------------|----------------------------|----------|
| Best estimate | | | |
| Lower estimate | | | |
| Higher estimate | | | |

| Estimates for the total country/territory | Number of affected stillbirths | Stillbirth prevalence / 1000 TB | Comments |
|---|--------------------------------|---------------------------------|----------|
| Best estimate | | | |
| Lower estimate | | | |
| Higher estimate | | | |

TB = total births (live births + stillbirths)

El Salvador

Rhesus Haemolytic Disease of the Newborn

RHD Epidemiology 2.3: Data on affected pregnancies: Other sources

| | Source 1: | Source 2: | Notes |
|---|-----------|-----------|---------------|
| Enter year and source of data – use last year with information available. | | | |
| Basic Numbers | | | |
| Number of affected live births / year, from data source | | | |
| Total number of live births / year, from data source | | | |
| Number of affected still births / year, from data source | | | |
| Total number of stillbirths / year, from data source | | | |
| Total number of affected births / year (live and still) | 0 | 0 | |
| Total number of births / year, from data source | 0 | 0 | |
| Total number of women aged 15-44 | | | |
| Live birth prevalence: recorded and estimated | | | |
| Recorded live birth prevalence (affected recorded live births / 1000 recorded total births) | #DIV/0! | #DIV/0! | |
| Estimated completeness of recording: what proportion of true affected live births in your data source were recorded? | | | Range: 0 to 1 |
| Estimated coverage of recorded live births (number of recorded live births / total live births in country or territory) | | | Range: 0 to 1 |
| Estimated live birth prevalence (recorded prevalence / completeness) | #DIV/0! | #DIV/0! | |
| Estimated true number of affected live births in data source (number of recorded affected live births / completeness) | #DIV/0! | #DIV/0! | |
| Estimated number of affected live births in total population (number of affected live births from data source / (coverage x completeness)) | #DIV/0! | #DIV/0! | |
| Stillbirth prevalence: recorded and estimated | | | |
| Recorded stillbirth prevalence (affected recorded still births / 1000 recorded total births) | #DIV/0! | #DIV/0! | |
| Estimated completeness of recording: what proportion of true affected stillbirths in your data source were recorded? | | | Range: 0 to 1 |
| Estimated coverage of recorded stillbirths (number of recorded still births / total still births in country or territory) | | | Range: 0 to 1 |
| Estimated stillbirth prevalence (recorded prevalence / completeness) | #DIV/0! | #DIV/0! | |
| Estimated true number of affected stillbirths in data source (number of recorded affected still births / completeness) | #DIV/0! | #DIV/0! | |
| Estimated number of affected stillbirths in total population (number of affected still births from data source / (coverage x completeness)) | #DIV/0! | #DIV/0! | |

Based on the sources above, enter the best prevalence estimates for your population, and a range of values to reflect uncertainty of estimates and within country variation.

If studies are not representative of the national population you may need to weight your data (see the Guide for explanation on weighting and help with the calculations).

| Estimates for the whole country/territory | Number of affected live births | LB prevalence / 1000 TB |
|---|---------------------------------|-------------------------|
| Best estimate | | |
| Lower estimate | | |
| Higher estimate | | |
| Estimates for the whole country/territory | Number of affected still births | SB prevalence / 1000 TB |
| Best estimate | | |
| Lower estimate | | |
| Higher estimate | | |

TB = total births (live births + stillbirths)

El Salvador

Rhesus Haemolytic Disease of the Newborn

RHD Epidemiology 2.4: Summary of affected pregnancies

| Indicator | Your estimates | Range | PHGDB minimum estimates | Chosen estimates | Range | Source |
|--|----------------|-------|-------------------------|------------------|-------|--------|
| Number of annual affected live births | | | 110 | | | |
| Annual birth prevalence / 1000 TB | | | 0.19 | | | |
| Number of annual affected still births | | | | | | |
| Stillbirth prevalence / 1000 TB/year | | | 0.19 | | | |
| | | | | | | |
| | | | | | | |

If there are specific sub-types of condition, you can repeat this exercise below. However, you should consider (a) whether sub-types would have different implications for advocacy, and (b) whether a sub-type might require a full, specific needs assessment.

TB = total births (live births + stillbirths)

El Salvador

Rhesus Haemolytic Disease of the Newborn

RHD Epidemiology 2.5: Sub-population variation in affected pregnancies

If the birth prevalence rates vary by population sub-group (e.g. geographically or by another factor), indicate any population groups with different prevalence estimates from the whole population and describe reasons for variation. If a group is substantially different from the general population, you may wish to conduct a needs assessment for that group alone.

| Population sub-group | Number of affected live births | LB prevalence / 1000 TB | Reason for variation |
|----------------------|--------------------------------|-------------------------|----------------------|
| | | | |
| | | | |
| | | | |
| | | | |

| Population sub-group | Number of affected stillbirths | SB prevalence / 1000 TB | Reason for variation |
|----------------------|--------------------------------|-------------------------|----------------------|
| | | | |
| | | | |
| | | | |
| | | | |

| | | | |
|--|--|--|--|
| | | | |
|--|--|--|--|

TB = total births (live births + stillbirths)

El Salvador

Rhesus Haemolytic Disease of the Newborn

RHD Epidemiology 3.1: Mortality data: Research studies

| Source, year, site | Sample size | Age group | Study quality and representativeness | Main findings |
|--------------------|-------------|-----------|--------------------------------------|---------------|
| | | | | |
| | | | | |
| | | | | |

Based on the studies above, enter the best estimates for the specific mortality by age-group e.g. infant, under-5s, etc., as appropriate, and a range of values to reflect uncertainty of estimates and within-country variation.

If studies are not representative of the national population you may need to weight your data (see the Guide for explanation on weighting and help with the calculations).

| Mortality estimates | Number of deaths | Ratio (deaths / 1000 LB) | Comments |
|-------------------------------------|------------------|--------------------------|----------|
| Neonatal group (<28 days) | | | |
| Best estimate | | | |
| Lower estimate | | | |
| Higher estimate | | | |
| Infant group (<1 year) | | | |
| Best estimate | | | |
| Lower estimate | | | |
| Higher estimate | | | |
| Under-5 group (<5 years) | | | |
| Best estimate | | | |
| Lower estimate | | | |
| Higher estimate | | | |
| Other age group: | | | |
| Best estimate | | | |
| Lower estimate | | | |
| Higher estimate | | | |

LB = live births

El Salvador

Rhesus Haemolytic Disease of the Newborn

RHD Epidemiology 3.2: Mortality data: Vital registration data

| Fill in the blank cells based on your vital registration data. | |
|--|-----------------|
| Enter year and source of data | |
| | Registered data |
| Total registered live births | |
| Registered condition-specific neonatal deaths (first 28 days of life) | |
| Registered condition-specific infant deaths (first year of life) | |
| Registered condition-specific under-5 deaths (first 5 years of life) | |
| Registered condition-specific neonatal mortality ratio (condition-specific neonatal deaths / 1000 live births in the same year) | #DIV/0! |
| Registered condition-specific infant mortality (condition-specific infant deaths / 1000 live births in the same year) | #DIV/0! |
| Registered condition-specific under-5 mortality (condition-specific under-5 deaths / 1000 live births in the same year) | #DIV/0! |

Adjustment for under-ascertainment of cause of death and sub-registration of deaths: Enter estimates in the highlighted cells. It is not always possible to adjust the estimates, in which case you may give the value '1', accepting that the estimates in these cases will usually be biased towards low values. (Or you may move to the next section.)

It is assumed that under-ascertainment is stable across age-groups; if ascertainment varies by age-group, you could use separate estimates for each age group.

| | | |
|--|---------|---------------|
| Estimated completeness of recording: what proportion of deaths in affected persons were registered as such? | | Range: 0 to 1 |
| Population coverage: what proportion of the total country/territory population is covered by the vital registration? | | Range: 0 to 1 |
| Death ascertainment (population coverage x completeness) | 0 | |
| Estimated values for the total country/ territory population | | |
| Estimated number of live births in total population | #DIV/0! | |
| Estimated number of neonatal deaths in total population (number of deaths registered in neonatal period / ascertainment) | #DIV/0! | |
| Estimated number of infant deaths in total population (number of deaths registered in first year of life / ascertainment) | #DIV/0! | |
| Estimated number of under-5 deaths in total population (number of deaths registered in under-5s / ascertainment) | #DIV/0! | |
| Estimated neonatal mortality ratio (estimated neonatal deaths / 1000 live births) | #DIV/0! | |
| Estimated infant mortality ratio (estimated infant deaths / 1000 live births) | #DIV/0! | |
| Estimated under-5 mortality ratio (estimated under-5 deaths / 1000 live births) | #DIV/0! | |

El Salvador

Rhesus Haemolytic Disease of the Newborn

RHD Epidemiology 3.3: Mortality data: Other sources

| Source, year, site | Sample size | Age group | Data quality and representativeness | Main findings |
|--------------------|-------------|-----------|-------------------------------------|---------------|
| | | | | |
| | | | | |
| | | | | |

Based on data from the sources above, enter estimates for the disease-specific deaths and mortality rates in your population.

If studies are not representative of the national population you may need to weight your data (see the Guide for explanation on weighting and help with the calculations).

| | Neonatal mortality | | Infant mortality | | Under-5 mortality | |
|---|--------------------|---------------|------------------|---------------|-------------------|---------------|
| Estimates for the total country/territory | Value | Ratio/1000 LB | Value | Ratio/1000 LB | Value | Ratio/1000 LB |
| Best estimate | | | | | | |
| Lower estimate | | | | | | |
| Higher estimate | | | | | | |

El Salvador

Rhesus Haemolytic Disease of the Newborn

RHD Epidemiology 3.4: Summary mortality estimates

| Indicator | Your estimates | Range | PHGDB minimum estimates | Chosen estimates | Range | Source |
|--|----------------|-------|-------------------------|------------------|-------|--------|
| Year of data collection | | | | | | |
| Number of annual deaths in affected persons | | | | | | |
| Number of annual live births (in 1000s) | | | 127 | | | |
| Number of annual affected neonatal deaths | | | 49 | | | |
| Number of affected neonatal deaths / 1000 LB | | | 0.39 | | | |
| Number of annual affected infant deaths | | | 52 | | | |
| Number of affected infant deaths / 1000 LB | | | 0.41 | | | |
| Number of annual affected under-5 deaths | | | 70 | | | |
| Number of affected under-5 deaths / 1000 LB | | | 0.55 | | | |
| Mean life expectancy at birth in affected | | | 29 | | | |
| Other indicators (e.g. survival following surgical procedure, etc) | | | | | | |

If there are specific sub-types of condition, you can repeat this exercise (copy table and paste below). However, you should consider (a) whether sub-types would have different implications for advocacy, and (b) whether a sub-type might require a full, specific needs assessment.

El Salvador

Rhesus Haemolytic Disease of the Newborn

RHD Epidemiology 3.5: Sub-population variation in mortality

| Age group: neonatal Population sub-group | Number of deaths in affected persons | Cause-specific, group-specific neonatal mortality ratio / 1000 LB | Reason for variation |
|---|---|--|----------------------|
| | | | |
| | | | |
| | | | |
| | | | |

| Age group: infant Population sub-group | Number of deaths in affected persons | Cause-specific, group-specific infant mortality ratio / 1000 LB | Reason for variation |
|---|---|--|----------------------|
| | | | |
| | | | |
| | | | |
| | | | |

| Age group: under 5 Population sub-group | Number of deaths in affected persons | Cause-specific, group-specific under-5 mortality ratio / 1000 LB | Reason for variation |
|--|---|---|----------------------|
| | | | |
| | | | |
| | | | |
| | | | |

| Age group: Population sub-group | Number of deaths in affected persons | Cause-specific, group-specific mortality ratio / 1000 population | Reason for variation |
|--|---|---|----------------------|
| | | | |
| | | | |
| | | | |
| | | | |

Rhesus Haemolytic Disease of the Newborn

RHD Epidemiology 4.1: Population prevalence: Research studies

| Study, year, site | Sample size | Study quality and representativeness | Main findings |
|-------------------|-------------|--------------------------------------|---------------|
| | | | |
| | | | |
| | | | |

Based on the studies above, enter the best estimates for population prevalence, and a range of values to reflect uncertainty of estimates and within-country variation.

If studies are not representative of the national population you may need to weight your data (see the Guide for explanation on weighting and help with the calculations).

| | Prevalence / 1000 persons | Range | Comments |
|-----------------|---------------------------|-------|----------|
| Best estimate | | | |
| Lower estimate | | | |
| Higher estimate | | | |

If there are specific sub-types of condition, you can repeat this exercise (copy table and paste below). However, you should consider (a) whether sub-types would have different implications for advocacy, and (b) whether a sub-type might require a full, specific needs assessment.

El Salvador

Rhesus Haemolytic Disease of the Newborn

RHD Epidemiology 4.2: Population prevalence: Other sources

| Source, year, site | Sample size | Data quality and representativeness | Main findings |
|--------------------|-------------|-------------------------------------|---------------|
| | | | |
| | | | |
| | | | |

Based on data from the sources above, enter estimates for the disease-specific deaths and mortality rates in your population.

If studies are not representative of the national population you may need to weight your data (see the Guide for explanation on weighting and help with the calculations).

| | Prevalence / 1000 persons | Range | Comments |
|-----------------|---------------------------|-------|----------|
| Best estimate | | | |
| Lower estimate | | | |
| Higher estimate | | | |

If there are specific sub-types of condition, you can repeat this exercise (copy table and paste below). However, you should consider (a) whether sub-types would have different implications for advocacy, and (b) whether a sub-type might require a full, specific needs assessment.

El Salvador

Rhesus Haemolytic Disease of the Newborn

RHD Epidemiology 4.3: Summary of population prevalence

| Source of estimates | Estimated total population number of affected persons | Range | Estimated total population prevalence / 1000 persons | Range |
|---------------------|---|-------|--|-------|
| 1 | | | | |
| 2 | | | | |
| 3 | | | | |
| 4 | | | | |
| 5 | | | | |
| PHGDB | | | | |
| Chosen estimates | | | | |

If there are specific sub-types of condition, you can repeat this exercise (copy table and paste below). However, you should consider (a) whether sub-types would have different implications for advocacy, and (b) whether a sub-type might require a full, specific needs assessment.

El Salvador

Rhesus Haemolytic Disease of the Newborn

RHD Epidemiology 4.4: Sub-population prevalence variation

| Population sub-group | Number of affected people | Total number of people in population sub-group | Population prevalence per 1000 people | Reason for variation |
|----------------------|---------------------------|--|---------------------------------------|----------------------|
| | | | #DIV/0! | |
| | | | #DIV/0! | |
| | | | #DIV/0! | |
| | | | #DIV/0! | |

If there are specific sub-types of condition, you can repeat this exercise (copy table and paste below). However, you should consider (a) whether sub-types would have different implications for advocacy, and (b) whether a sub-type might require a full, specific needs assessment.

Formula in column D: Number of affected people/ (Total number of people in population subgroup/1000)

El Salvador

Rhesus Haemolytic Disease of the Newborn

SCD Intervention 1: Effects of prenatal screening and treatment

| | | |
|---|--|-------------|
| Baseline prevalence of RHD per 1000 TB | | |
| Variables | | |
| Coverage of prenatal screening | | Range: 0 to |
| Proportion of RhD negative women receiving anti-D | | Range: 0 to |
| Effectiveness of anti-D in RhD negative women | | Range: 0 to |
| Results | | |
| % prevalence reduction due to PNS & treatment ¹ | | 0% |
| Prevalence reduction due to PNS & treatment, per 1000 TB ² | | 0.000 |
| Final prevalence of RHD-affected live births and still births after PNS & treatment, per 1000 TB ³ | | 0.000 |

RHD = Rhesus Haemolytic Disease of the Newborn

PNS = prenatal screening

TB = total births (live births + still births)

¹ (Coverage of PNS X Proportion of women receiving anti-D) X Effectiveness of anti-D² % prevalence reduction due to PNS and treatment X Baseline prevalence of RHD³ Baseline prevalence of RHD – Prevalence reduction due to PNS and treatment

El Salvador

Rhesus Haemolytic Disease of the Newborn

RHD Intervention 2: Effects of NBS and management on Rhesus Haemolytic Disease of the Newborn

| | | |
|---|---|---------------|
| Baseline birth prevalence of RHD, per 1000 LB | | |
| Variables | | |
| Coverage of newborn screening | | Range: 0 to 1 |
| Proportion of positive-screened patients receiving treatment | | Range: 0 to 1 |
| Effectiveness of treatment | | Range: 0 to 1 |
| Results | | |
| Proportional reduction of uncontrolled cases through NBS and treatment ¹ | 0 | |
| Prevalence of uncontrolled RHD deficiency after newborn screening and treatment, per 1000 LB ² | 0 | |

LB = live births

NBS = newborn screening

RHD = Rhesus Haemolytic Disease of Newborn

If you don't have data on birth prevalence but do have data on screening, you can estimate birth prevalence by combining the proportion screened positive with the number of total births. (This assumes that screening is randomly distributed in the population).

¹Coverage of newborn screening X Proportion of screen-positive cases receiving treatment X Effectiveness of treatment

²Baseline birth prevalence – (Proportional reduction of uncontrolled cases of RHD X Baseline birth prevalence)

El Salvador

Rhesus Haemolytic Disease of the Newborn

RHD Needs Assessment Calculator 1: Quantitative baseline

Table RHD-NA1a Burden of Rhesus Haemolytic Disease of the Newborn in pregnancy, at birth and at population level

| Indicator | Chosen estimates | | | Notes |
|--|------------------|-----------|--------------------------------|-----------------------|
| | Number (n) | n/1000 TB | Range of prevalence (/1000 TB) | |
| Annual affected live births (LB) | 0 | 0 | 0 | Drawn from sheet E2.4 |
| Annual affected stillbirths (SB) | 0 | 0 | 0 | Drawn from sheet E2.4 |
| Annual affected births (LB+SB) | 0 | 0 | | Drawn from sheet E2.4 |
| Annual affected persons (all age groups) | 0 | 0 | 0 | Drawn from sheet E1.1 |

Table RCD-NA1b Rhesus Haemolytic Disease of the Newborn mortality indicators

| Indicator | Chosen estimates | | | Notes |
|---|------------------|-----------|--------------------------------|-----------------------|
| | Number (n) | n/1000 LB | Range of prevalence (/1000 TB) | |
| Annual overall mortality | 0 | | | Drawn from sheet E3.4 |
| Annual neonatal mortality | 0 | 0 | 0 | Drawn from sheet E3.4 |
| Annual infant mortality | 0 | 0 | 0 | Drawn from sheet E3.4 |
| Annual under-5 mortality | 0 | 0 | 0 | Drawn from sheet E3.4 |
| Mean life expectancy at birth among affected people | 0 | | 0 | Drawn from sheet E3.4 |

TB = total births (live births + stillbirths)

Rhesus Haemolytic Disease of the Newborn

RHD Needs Assessment Calculator 3: Quantitative assessment of interventions

| Table SCD-NA3a | Estimated prevalence in the absence of interventions for Sickle Cell Disease | |
|------------------------|--|---------------------|
| Indicator | Number (n) | Prevalence (n/1000) |
| Potential live births | | |
| Potential still births | | |

| Table RHD-NA3b | Current situation in relation to interventions before birth | | |
|--|---|-------------------|-----------------------|
| Intervention | Coverage (%) | Cases averted (n) | Cases averted/1000 LB |
| Effect of family planning, education | | | |
| Effect of anti D prophylaxis | | | |
| Effect of prenatal diagnosis and treatment | | | |
| Effect of neonatal diagnosis | | | |
| Effect of treatment of newborn | | | |
| Overall effect | | | |

| Table RHD-NA3c | Target situation in relation to interventions before birth | | |
|--|--|-------------------|-----------------------|
| Intervention | Coverage (%) | Cases averted (n) | Cases averted/1000 LB |
| Effect of family planning, education | | | |
| Effect of anti D prophylaxis | | | |
| Effect of prenatal diagnosis and treatment | | | |
| Effect of neonatal diagnosis | | | |
| Effect of treatment of newborn | | | |
| Overall effect | | | |

| Table RHD-NA3d | Current situation in relation to interventions after birth | | |
|-------------------------|--|-------------------|-----------------------|
| Intervention | Coverage (%) | Cases managed (n) | Cases managed/1000 LB |
| Newborn diagnosis | | | |
| Phototherapy | | | |
| Blood transfusion | | | |
| Social care and support | | | |
| Overall effect | | | |

| Table RHD-NA3e | Target situation in relation to interventions after birth | | |
|-------------------------|---|-------------------|-----------------------|
| Intervention | Coverage (%) | Cases managed (n) | Cases managed/1000 LB |
| Newborn diagnosis | | | |
| Phototherapy | | | |
| Blood transfusion | | | |
| Social care and support | | | |
| Overall effect | | | |

| Table RHD-NA3f | Current and desired outcomes | | | |
|---------------------------------|------------------------------|--------------------|-------------------|--------------------|
| | Current situation | | Target situation | |
| Indicator | Annual number (n) | Incidence (n/1000) | Annual number (n) | Incidence (n/1000) |
| Estimated affected pregnancies | | | | |
| Live births (LB) | 0 | 0 | | |
| Still births (SB) | 0 | 0 | | |
| All births (LB+SB) | 0 | 0 | | |
| Estimated population prevalence | | | | |
| All age groups | | | | |
| Estimated mortality | | | | |
| Neonatal deaths | 0 | 0 | | |
| Infant deaths | 0 | 0 | | |
| Under-5 deaths | 0 | 0 | | |
